PROFILE

Business Analyst at Infotechtion working on Microsoft 365 data-governance programmes: discovery, stakeholder interviews, structured user research, requirements, user stories and acceptance criteria. Independently I design and build software, most substantially Memora, a Unity/C# rhythm game with a custom authoring editor, DSP-clocked timing and a story system. I also work with Python and SQL for data extraction and analysis. MSci Chemistry, Imperial College London.

EXPERIENCE

Business Analyst · Change Management, Infotechtion

Current

- Turn ambiguous stakeholder goals into business and technical requirements, user stories and acceptance criteria, managed in Azure DevOps.
- Plan and run structured user research with Records Management and Information Governance users: sessions, synthesis of needs, usability and process problems, and prioritisation.
- Run technical discovery and stakeholder interviews that span business owners and engineering teams.
- Map current and future processes, including data ingestion and validation workflows.
- Support adoption with training, communications and change activity alongside delivery.

Technical Consultant, Xander Talent

From Dec 2023

- Ran current-state and future-state analysis to find why a client's Salesforce CRM was under-used, and what would change that.
- Reduced redundant form inputs and extraction work through an ETL redesign, then presented the results to the client.
- Presented data insights to non-technical stakeholders so they could make decisions from them.
- Worked in iterative Scrum delivery with regular client review.

US/UK Tax Trainee, Jaffe & Co

Jul – Nov 2023

- Prepared and checked US and UK individual and corporate returns, working across two regulatory systems.
- Reviewed client documents for validity and completeness before filing.

Computational Research Assistant, University of Cambridge · In2Research

Jul – Sep 2022

- Built a Python workflow that generates random polyethylene structures and relaxes them with a force field, following the AIRSS structure-search method.
- Presented the work as a poster at the In2Research summer conference.

SELECTED INDEPENDENT PROJECTS

Memora: rhythm game and authoring environment (Unity 6, C#)

2025 – present

- Designed a judgement contract that separates each note's beat, target and action from its presentation, so moving lines, floating notes and effects can't change scoring.
- Built DSP-clocked timing with per-device latency calibration (four taps, outlier-resistant estimate).
- Built a custom Unity charting editor with shared runtime evaluators, interval-indexed seeking, versioned phrase presets and undo transactions.
- Profiled and fixed editor playback: mean repaint fell from about 120 ms to 15 ms on the largest chart, verified by 18,125 automated parity checks.

DesktopIdle: Windows idle utility (.NET 8, Win32)

2026

- Tray app that clears and restores the desktop after inactivity, using idle detection, window and taskbar control, and media-session awareness. It includes a fix for self-generated input ending idle mode.

League of Legends data study (Python, SQL, Riot Games API)

2024

- Extracted rate-limited API data, reshaped it to match a 2020 dataset, loaded both into MySQL and compared which in-game factors correlate with winning, noting where the two datasets aren't like-for-like.

EDUCATION

MSci Chemistry (2:1), Imperial College London

2019 – 2023

Computational dissertation: reproducibility when building complex inputs for large biological assemblies in Gaussian16. I developed and reviewed a workflow to streamline the process.

Technical specialism, Xander Academy

2023 – 2024

Python (Flask, SQLAlchemy, Pandas), SQL (MySQL), data modelling, ETL, Power BI.

A-levels, LaSWAP Sixth Form

2017 – 2019

Chemistry (A*), Computer Science (A), Mathematics (A), Physics (A).

SKILLS

Analysis: requirements engineering, user stories and acceptance criteria, user research and synthesis, process mapping, stakeholder engagement, Azure DevOps, change and adoption.

Engineering: C# (Unity 6, .NET 8, WinForms, WPF), Win32 interop, Git/GitHub, software architecture and profiling.

Data: Python (Pandas, NumPy, Requests), SQL (MySQL, SQLAlchemy), REST APIs, Tableau, Power BI.

Languages: English, Korean (fluent).
